

# MATH1025 Homework 4 Feedback

Petra Staynova

November 4, 2019

**Question 1.** Note that the instructions to tutors are that work without a  $\text{\LaTeX}$  file should get a mark of '0'. So do brush up on your  $\text{\LaTeX}$ !

1. Please do not write text/words in math mode. If you absolutely need to, use a text environment such as  $\text{\texttt{\textit{...}}}$ .
2. Use  $\text{\texttt{\mod}}$  for correct typesetting of 'mod' in mathmode
3. Use  $\text{\texttt{\$ \$ ... \$ \$}}$  for displaying math equations.
4. Use  $\text{\texttt{\begin{align*}}}$  and respectively  $\text{\texttt{\end{align*}}}$  for writing multiline displayed math (think about how you will use line breaks and which part of the equation you want aligned).
5. Justify how you got from one line to the other.
6. You should provide a printout of the outputted pdf file, not your code.

**Question 4.** Overall very well done!

1. Use a few more linking words.
2. Avoid using 'certainly' and 'obviously' and similar words. Instead, provide a brief explanation.
